

2018 PI Q3	<p>Solve, algebraically, the system of equations</p> $4x + 5y = -3$ $6x - 2y = 5.$	3
Ans	$x = 0.5, y = -1$	
2017 PI Q13	<p>The graph below shows two straight lines with the equations:</p> <ul style="list-style-type: none"> $3x - y = 2$ $x + 3y = 19$  <p>The lines intersect at the point P. Find, algebraically, the coordinates of P.</p>	3
Ans	$(2.5, 5.5)$	
2016 PI Q4	<p>Charlie is making costumes for a school show. One day he made 2 cloaks and 3 dresses. The total amount of material he used was 9.6 square metres.</p> <p>(a) Write down an equation to illustrate this information.</p> <p>(b) The following day Charlie made 3 cloaks and 4 dresses. The total amount of material he used was 13.3 square metres. Write down an equation to illustrate this information.</p> <p>(c) Calculate the amount of material required to make one cloak and the amount of material required to make one dress.</p>	1 1 4
Ans	$2c + 3d = 9.6$ (b) $3c + 4d = 13.3$ (c) cloak = $1.5m^2$, dress = $2.2m^2$	

2015 P1 O11	<p>Solve algebraically the system of equations</p> $3x + 2y = 17$ $2x + 5y = 4.$	3
Ans	$x = 7, y = -2$	
2015 P1 Q8	<p>Using graphical means, solve the system of equations:</p> $y = 2x + 5$ $y = 3x + 6.$ <p>Use the squared paper provided.</p>	3
Ans	$x = -1, y = 3$	
2014 P2 Q3	<p>Two groups of people go to a theatre. Bill buys tickets for 5 adults and 3 children. The total cost of his tickets is £158.25.</p> <p>(a) Write down an equation to illustrate this information.</p> <p>(b) Ben buys tickets for 3 adults and 2 children. The total cost of his tickets is £98. Write down an equation to illustrate this information.</p> <p>(c) Calculate the cost of a ticket for an adult and the cost of a ticket for a child.</p>	1 1 4
Ans	<p>(a) $5a + 3c = 158.25$ (b) $3a + 2c = 98$ (c) Adult Ticket costs £22.50. Child Ticket costs £15.25</p>	
2014 P2 Q4	<p>Mr Smith and Mrs Curran both shop at the same store.</p> <p>(a) Mr Smith bought 3 loaves and 2 packets of butter. The total cost was £4.73. Let x pounds be the cost of a loaf and y pounds be the cost of a packet of butter. Write down an equation in x and y which satisfies the above condition.</p> <p>(b) Mrs Curran bought 5 loaves and 3 packets of butter. The total cost was £7.52. Write down a second equation in x and y which satisfies this condition.</p> <p>(c) Use the equations in parts (a) and (b) to find the cost of a loaf and the cost of a packet of butter.</p>	1 1 4
Ans	<p>(a) $3x + 2y = 4.73$ (b) $5x + 3y = 7.52$ (c) A loaf costs £0.85 and a packet of butter costs £1.09.</p>	

2013 P1 Q4	Solve algebraically the system of equations $2x - y = 10$ $4x + 5y = 6.$	3
Ans	$x = 4, y = -2$	
2012 P2 Q6	Three groups are booking a holiday. The first group consists of 6 adults and 2 children. The total cost of their holiday is £3148. Let x pounds be the cost for an adult and y pounds be the cost for a child. (a) Write down an equation in x and y which satisfies the above information.	1
	The second group books the same holiday for 5 adults and 3 children. The total cost of their holiday is £3022. (b) Write down a second equation in x and y which satisfies this information.	1
	(c) The third group books the same holiday for 2 adults and 4 children. The travel agent calculates that the total cost is £2056. Has this group been overcharged? Justify your answer.	4
Ans	$(a) 6x + 2y = 3148$ $(b) 5x + 3y = 3022$ (c) Yes, the group has been overcharged by £10.	
2011 P2 Q7	Alan is taking part in a quiz. He is awarded x points for each correct answer and y points for each wrong answer. During the quiz, Alan gets 24 questions correct and 6 wrong. He scores 60 points. (a) Write down an equation in x and y which satisfies the above condition.	1
	Helen also takes part in the quiz. She gets 20 questions correct and 10 wrong. She scores 40 points. (b) Write down a second equation in x and y which satisfies this condition.	1
	(c) Calculate the score for David who gets 17 correct and 13 wrong.	4
Ans	$(a) 24x + 6y = 60$ $(b) 20x + 10y = 40$ (c) 25 points	
2010 P2 Q5	Solve algebraically the system of equations $2x - 5y = 24$ $7x + 8y = 33.$	3
Ans	$x = 7, y = -2$	

2009 P2 Q4	<p>There are 14 cars and 60 passengers on the morning crossing of the ferry from Wemyss Bay to Rothesay. The total takings are £344.30.</p> <p>(a) Let x pounds be the cost for a car and y pounds be the cost for a passenger. Write down an equation in x and y which satisfies the above condition.</p> <p>(b) There are 21 cars and 40 passengers on the evening crossing of the ferry. The total takings are £368.95. Write down a second equation in x and y which satisfies this condition.</p> <p>(c) Find the cost for a car and the cost for a passenger on the ferry.</p>	1 1 4
Ans	(a) $14x + 60y = 344.30$ (b) $21x + 40y = 368.95$ (c) A car costs £11.95 & a passenger £2.95	
2008 P2 Q4	<p>Suzie has a new mobile phone. She is charged x pence per minute for calls and y pence for each text she sends. During the first month her calls last a total of 280 minutes and she sends 70 texts. Her bill is £52.50.</p> <p>(a) Write down an equation in x and y which satisfies the above condition.</p> <p>The next month she reduces her bill. She restricts her calls to 210 minutes and sends 40 texts. Her bill is £38.00.</p> <p>(b) Write down a second equation in x and y which satisfies this condition.</p> <p>(c) Calculate the price per minute for a call and the price for each text sent.</p>	1 1 4
Ans	(a) $280x + 70y = 5250$ (b) $210x + 40y = 3800$ (c) Call = 16p per minute, Text = 11p	
2007 P1 Q4	Find the point of intersection of the straight lines with equations $x + 2y = -5$ and $3x - y = 13$.	4
Ans	(3, -4)	
2006 P2 Q2	<p>Solve algebraically the system of equations</p> $4x + 2y = 13$ $5x + 3y = 17.$	3
Ans	$x = 2.5, y = 1.5$	

2003 P2 Q3	<p>Seats on flights from London to Edinburgh are sold at two prices, £30 and £50.</p> <p>On one flight a total of 130 seats was sold.</p> <p>Let x be the number of seats sold at £30 and y be the number of seats sold at £50.</p> <p>(a) Write down an equation in x and y which satisfies the above condition.</p> <p>The sale of the seats on this flight totalled £6000.</p> <p>(b) Write down a second equation in x and y which satisfies this condition.</p> <p>(c) How many seats were sold at each price?</p>	1 1 4
Ans	(a) $x + y = 130$ (b) $30x + 50y = 6000$ (c) 25 seats at £30 and 105 seats at £50	
2002W P2 Q5	<p>At an amusement park, the Green family buy 3 tickets for the ghost train and 2 tickets for the sky ride. The total cost is £8.60.</p> <p>(a) Let x pounds be the cost of a ticket for the ghost train and y pounds be the cost of a ticket for the sky ride.</p> <p>Write down an equation in x and y which satisfies the above condition.</p> <p>(b) The Black family bought 5 tickets for the ghost train and 3 tickets for the sky ride at the same amusement park. The total cost was £13.60.</p> <p>Write down a second equation in x and y which satisfies this condition.</p> <p>(c) Find the cost of a ticket for the ghost train and the cost of a ticket for the sky ride.</p>	1 1 4
Ans	(a) $3x + 2y = 8.60$ (b) $5x + 3y = 13.60$ (c) $x = £1.40$, $y = £2.20$	
2002 P2 Q2	<p>Solve algebraically the system of equations</p> $3x - 2y = 11$ $2x + 5y = 1.$	3
Ans	$x = 3$, $y = -1$	
2001 P1 Q3	<p>Find the point of intersection of the straight lines with equations $2x + y = 5$ and $x - 3y = 6$.</p>	4
Ans	$(3, -1)$
